## Evening Brief

Date: July 10<sup>th</sup>, 2021

---

### Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light Initial Attack Activity
National	PL 4	New Fires and Acres: 9 fires for 4,200.9 acres / 1,020 acres Large Fire Growth

---

### Weather Summary:

**... Very HOT Temperatures into Next Week ...**

**... Isolated Lightning Sunday but Increasing Coverage through this Week ...**

**... Increasing Winds over Western and Northern Areas Sunday into This Week ...**

High pressure will remain in place into next week with continued very hot and dry conditions across the area, with temperatures 10-15 degrees above normal, with some areas reaching record highs. Temperatures will remain above 100 degrees in nearly all Great Basin valley locations and above 115 degrees in the south **Isolated mixed wet/dry lightning** is expected in the higher terrain over the southern third of the Great Basin and along parts of the Sierra Front on Sunday.

**Winds will start increasing over western and northern areas** by Sunday, but stronger gusts are likely to peak on Tuesday. See high risk for breezier/dry areas.

Another surge of monsoon moisture is expected early this week with lightning increasing over the southern half of the Great Basin. Storms may start out drier, but deeper moisture with some wetting rains looks to push into at least the far south by midweek. High Risk for lightning for was added for later this coming week on the leading edge of where the drier storms may occur.

---

### Fuels/Fire Potential:

**... Fuels and Fire Behavior Advisory in effect for Utah, the Arizona Strip and Southern/Eastern/Central Nevada ...**

**...Fire potential is on the increase regionwide through the coming week due to continued hot and dry weather and increasing chances for wind/lightning...**

The continued hot and dry weather will cause fire danger values to rapidly increase once again to near the 90<sup>th</sup> -97<sup>th</sup> percentile over much of the Geographic Area through early next week. Wind will pick up again across Idaho and Western Nevada Sunday into next week, and lightning will remain isolated Sunday, but increase next week. Another monsoon push occurs by early next week from the south bringing increased lightning coverage to the

southern half of the region which will increase ignition potential, especially on the northern fringes where there is a better potential for drier lightning. Moisture looks to increase for a short period of time across far southern and eastern areas, which could take the edge off critical fuel dryness there by later this coming week.

## Resources:

### Aviation within the Great Basin

- 0 VLAT, 2 LATs, 0 CL-415
- 25 SEATs, 2 FB, 9 AA, 1 ASM, 1 LP
- 0 HLCOs
- 10 Type 1 Helicopters / 7 Comm.
- 6 Type 2 Helicopters / 4 Comm.
- 19 Type 3 Helicopters / 9 Comm.

### Crews Committed within the Great Basin

- 7 IHCs / 1 Available / 1 R&R
- 8 Type 2IA / 3 Available / 1 R&R

## Current Incident Details

Today's Activity (from WFDSS):

Incident Name	Unique Fire Identifier	Size	Status	Latitude	Longitude	Pt. of Origin Sage Grouse Habitat
*Pinenut	2021-NVCCD-030446	0.1	Controlled 07/09/21	38.87466	-119.6435	NO
